

AI-First Remote Management, Monitoring and Resolution

Tassient Aipec delivers Agentic AI for device and server troubleshooting, so your IT team can monitor, diagnose, and resolve issues faster than ever before.

AI-First Assistance Built with Agentic AI embedded from the start, Aipec functions as a copilot alongside your IT team to investigate issues and resolve problems rapidly.

Guided Remediation Reduce your Time to Resolution (TTR) as Aipec performs rapid root cause analysis, and walks teams through complex fixes and with approved remediation actions.

Easy Deployment Minimal agentic footprint across all platforms, with a download of less than 10MB, negligible CPU overhead, no reboots, no drivers, and integration with platforms like Intune, System Center and JAMF.

Patch Management Scan and understand patch status for reporting and compliance. Deliver and Install Patches easily with minimal user disruption.

Live Monitoring Continuous second-by-second visibility with performance charts and network maps. The agentic AI assistant adds and analyzes custom counters to focus on problem areas.

Remote Control and Remote Shell Integrated, world-class, live remote desktop access directly from any web browser. Switch between system and user contexts to assist in any environment.

Comprehensive Device Inventory Automatically maintains a searchable deep inventory of hardware, software, and network configuration across Windows, Mac, and Linux platforms.

Integrate with Service Management Document remediations through automated integrations with common ITSM toolsets.

Get Started Today!
