

Device Removal from Aipex Dashboard

Platform: AIPEX Management Console | Target Audience: Technical Administrators

1. Purpose & Scope

This document outlines the procedure for unregistering and removing managed endpoints from the AIPEX platform. Executing this procedure disassociates the device from the organization inventory and halts active management telemetry until the device is re-registered.

2. Administrative Considerations

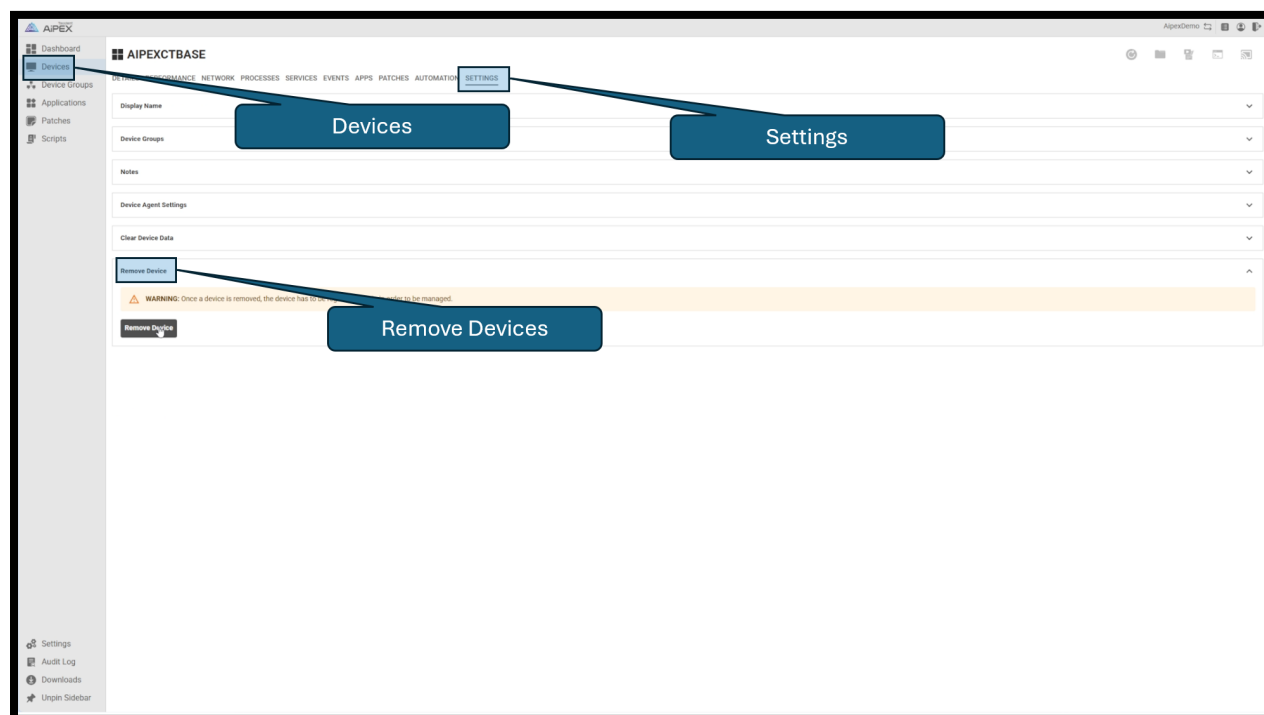

IMPORTANT WARNING:

- Device removal is permanent and cannot be undone from the console UI.
- Once removed, the endpoint will require full re-registration to restore centralized management capabilities.

3. Step-by-Step Removal Procedure

1. Access the Devices Inventory

From the primary navigation sidebar on the left side of the AIPEX console, click on Devices to load the organizational endpoint roster.

2. Locate and Select the Target Endpoint

In the Devices table, locate the target system (e.g., AIPEXTESTBASE). Click on the device Name link to open its detailed management view.

3. **Navigate to Device Configuration Settings**

Within the device management view, select the **SETTINGS** tab located on the top horizontal menu bar.

4. **Expand the Decommissioning Section**

Scroll to the bottom of the settings pane. Click the **Remove Device** expandable accordion section to reveal the administrative action controls.

5. **Execute Device Removal**

Review the displayed removal warning prompt and click the red **Remove Device button**.

6. **Confirm Action in the Modal Dialog**

In the confirmation dialog ('Are You Sure? You are about to remove a device from the organization. This cannot be undone. '), click **OK**.

7. **Verify Inventory Update**

The console will redirect back to the main Devices inventory list. Confirm that the removed device is no longer listed in the active device table.

4. Summary of Navigation Path

The following reference matrix provides an authoritative, at-a-glance operational index of interface pathways, UI targets, and administrator execution steps:

Step / Phase	Interface Location	Action Required
1. Navigation	Left Sidebar > Devices	Select primary device inventory
2. Selection	Devices Table > [Device Name]	Click target hostname link
3. Settings	Device Top Bar > SETTINGS	Switch to configuration view
4. Section Expansion	Settings Page Bottom > Remove Device	Click chevron to expand panel
5. Execution	Action Button > [Remove Device]	Click removal button
6. Verification	Dialog Modal > [OK]	Confirm irreversible removal
